

GIARDINA GROUP at Xylexpo 2024

Giardina Group has been present again at the 2024 edition of **Xylexpo**, a long-standing participation that confirms the Italian Group's desire to maintain a constant focus on the "local" market, which is undoubtedly the target audience for the Milanese showcase.

"Although more than 90% of our production is exported, Italian companies requiring a quality finish have always been our main partners, not only as customers, but also and above all as partners with whom we can develop new technologies that will then be introduced to the rest of the world" commented **Stefano Mauri**, owner of the Giardina Group together with his brother **Riccardo Mauri**.

The leading Group in the finishing sector has once again enlivened its stand (Hall 01, Stand D05) with a series of "Live demos" created in co-operation with a number of paint manufacturers.

On **21st May**, technologies "made in Giardina Group" have applied products from **Sirca** (www.sirca.it), on **22nd May** they were from **Icro Coatings** (www.icro.it), on **23rd May** from **Ica** (www.icapasa.com) and on **24th May** from **Renner Italia** (www.renneritalia.com).

In the spotlight you could find the well-established "**Rolltech Flexi**", a roller coater created during four years of extensive research and testing that have resulted in the development of an extremely sturdy and versatile solution, capable of responding to market needs with a series of innovative technical solutions that have resulted in its patent.

A machine designed and built to apply UV and conventional primers on 3D surfaces, but which has also proved to be an excellent solution for the application of special coating cycles on flat surfaces.

At Xylexpo, of course, there was room for the "**Dualtech 400**", an automatic spraying machine with two reciprocating arms and paper belt that is the epitome of the Group's expertise and comprehensive catalogue of solutions in this specific segment of the coating industry.

As regards edge and profile sanding, the Group presented the **Destefani "Mvt 3000"** edge sander, in a configuration that has been gaining considerable popularity recently thanks to its ability to fulfill precise user requirements.

The Giardina Group's stand also had room for the important question of drying: in addition to the "**Uvtech GST**" oven, a new **UV LED oven** has been presented, which is based on technology that the Group is developing and which hasn't failed to attract the attention of industry professionals both at the trade fair and, more importantly, over the next few years.

As we all know, the efforts to reduce mercury lamps are shifting manufacturers' attention to other energy sources, and in these applications too, **LED lamps** can be an excellent solution, with enormous potential for development and innovation that - by stimulating LED manufacturers to achieve adequate emissions - will allow them to completely supplant current technologies at every stage of the coating process.

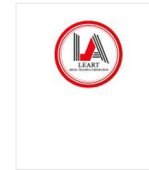

A BUSY WEEK...

The days in Milan were extremely busy, and not only at the fair: visitors wishing to learn more about certain topics, or get a closer look at all the technologies in the Giardina Group catalogue, were able to visit the "**Giampiero Mauri Innovation Centre**" in Novedrate, a few kilometres from Fieramilano-Rho. Here, it was possible to experience curtain, roller and spray coating solutions for **any quality and production requirements**, as well as witness specific spray coating trials with the "**Zerogloss**" excimer technology that now achieves **total opaqueness**, thereby increasing resistance to scratches, wear or marks not only on flat panels, but also on **3D panels**.

Giardina Group in a nutshell

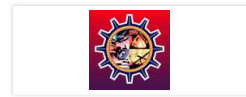

Seventy employees, a turnover of around 20 million euros, an export share of close to 95% and know-how that has resulted in an extremely comprehensive catalogue: from beam impregnation to the treatment of "jumbo" glass sheets, from profile finishing to sophisticated robot systems for coating windows and doors or furniture building materials. Today Giardina Group stands for design, development and manufacture of machines and full coating systems (roller, film, spray and vacuum); automated and robotic lines with hot air, UV or microwave drying systems; overhead lines to coat windows and doors or three-dimensional pieces, spray booths and special systems and - with Destefani - edge and profile sanding solutions.
